

# ENPRO Removes In-ground Fuel Tanks from Residential Property

Customer satisfaction remains ENPRO's number one priority

In October 2009, homeowner Frank Easton decided it was time to remove the three in-ground fuel tanks that were located approximately five feet below ground surface at his Corinth, VT property. The tanks – which were installed approximately 30 years ago – had become a potential liability due to their age and single-wall construction. After receiving proposals from multiple vendors, Easton contracted ENPRO Services, Inc. for the job. After assessing their condition, ENPRO carefully removed all residual liquids and sludge from the tanks. Once complete, the tanks and all associated piping were removed from the property. An environmental scientist then sampled the soil that had been around the removed tanks to confirm

that petroleum had not been released into the environment. Finally, the ENPRO team backfilled, loamed and seeded the excavation area and restored it to pre-removal conditions. Mr. Easton took a few moments to share his thoughts on his experience with ENPRO, Inc.

#### **What services did ENPRO provide to you?**

ENPRO removed three fuel tanks – one for gasoline, one for diesel and one for heating oil – from my property in October 2009. The level of professionalism displayed by Environmental Scientist Jeffrey Simone and his team far exceeded my expectations.

#### **What were the most positive aspects of your experience with ENPRO?**

The proposal I received from ENPRO was competitively priced and more detailed than the proposals I got from other vendors. They clearly explained what I should expect from the project and detailed the entire process step-by-step. They performed the work in a safe and professional manner and left my property in excellent condition when they were done.

#### **How did you find the overall experience of working with ENPRO?**

I am a tough critic. I work with service providers on a daily basis and to be honest, I'm usually left underwhelmed. The company took pride in their work, remained proactive throughout the entire process and always acted in my best financial interest. The level of customer care I received – from initial contact to the billing process – was unparalleled. I would recommend the quality of ENPRO's work in a heartbeat.

#### **Services Provided**

- Removal, management and proper disposal of residual liquids and sludge from tanks
- Removal of tanks and all associated piping
- Assessment of site conditions around tanks to document that petroleum had not been released from the tanks to the environment
